ANNEXURE 2

ORGANIZATIONAL CHART OF VASAVI COLLEGE OF ENGINEERING

Student Feedback:

Feedback from the Final Year students passing out from the College as well as those passed out earlier (Alumni) is being taken to ascertain their views/suggestions for college development, viz., infrastructure & laboratory support, teaching-learning process, value added programmes conducted by college, guidance to their juniors, etc.

On Faculty performance

- A formal student feedback system regarding faculty performance is in vogue for the last five years.
- Under this system, feedback in a structured form is obtained from all the students twice in a year to evaluate teaching-learning process in respect of the subjects taught by each faculty.
- Each parameter is quantified and rated on a 4-point rating scale. After compilation, the summary of the feedback showing their rating against each parameter and the overall rating against the 'set threshold level' is communicated through the Head of the Department to the respective faculty to strive for improvement in the areas rated below threshold level.
- A copy of the student feedback form on faculty performance is enclosed for reference (Vide Annexure-3-A)

Abstract:

In order to overcome the problems associated with manual deburring, a research attempt has been made for small sized components using a SCARA manipulator. In the present work a customized SCARA manipulator is used for deburring process. A kinematic verification was done using videographic analysis and MATLAB. Parametric optimization of surface roughness using SCARA Manipulator has been performed using Taguchi Method. Rectangular work pieces of three different types of materials i.e. Brass, Copper and Aluminum are considered and the end effector used in this case is a grinding wheel of aluminum oxide. The deburring parameters considered are Spindle speed, Feed rate and Depth of cut. An orthogonal array L9 was used to conduct the experiments using Taguchi method. The surface roughness of the work pieces is calculated using the instrument called Talysurf. Later the end effector of SCARA is used for machining on the mentioned workpieces for removal of burrs. Regression analysis is employed to analyze the effect of the machining parameters on material and was done by using statistical software MINITAB-17. The results obtained were validated, which were found satisfactory. Furthermore, process parameters optimization was done using TLBO Algorithm in MATLAB Environment. Validation was carried out using Genetic Algorithm.
